Arab Engineering Bureau celebrated 47th anniversary

Arab Engineering Bureau (AEB) celebrated its 47th anniversary on December 5, 2012 at the event held at the Diplomatic Club. Ibrahim Jaidah, prominent Qatari architect, Chief Executive and Chief Architect of AEB addressed over 400 staff members present at the event.

Mr. Jaidah reflected on exceptional growth of the firm beginning with 6 staff in 1991 to a current figure of over 500 professionals taking pride of this multicultural team of 33 different nationalities.

Ibrahim Jaidah emphasized: "I am proud to see people of different cultural and educational backgrounds work together, achieving unprecedented results."

Over the past 47 years AEB has completed over 1500 projects across the world, ranging from private villas to billion dollar mega-projects. Ibrahim Jaidah also stressed upon the importance of the architectural practice in rapidly developing State of Qatar. As Qatar is becoming, to a certain degree, a show piece for contemporary architecture of the 21st century, AEB is shaping up projects that push towards the Contemporary Gulf design and are establishing a modern Arabic vernacular.

"Our projects will continue to study Qatari cultural identity for the years to come" Ibrahim Jaidah said.

Founded in 1966 as the first architectural and engineering consulting firm in Qatar, Arab Engineering Bureau is a growing full service Architectural Design and Consultancy firm dedicated to the unique architectural concept. This unique concept, established by the principal and senior architect Ibrahim Mohammed Jaidah, who acquired AEB in 1991, portrays the present development of the country and where appropriate, preserves and articulates the traditional Qatari Architecture while ensuring that each design offers a functional space tailored to the needs and design brief.
